

# USA JOB MARKET 2025

FINAL PROJECT

# Overview

This dataset represents a modeled snapshot of the United States job market for the year 2025. It includes information related to salaries, hiring frequency, skill requirements, industry patterns, job role demand, and geographic workforce variations across major US states and metropolitan areas.

# Overview about Important Columns:

<b>Year</b>	<b>in 2025</b>
<b>month</b>	<b>Month of the year</b>
<b>quarter</b>	<b>Year quarter</b>
<b>season</b>	<b>Hiring season</b>
<b>job_title</b>	<b>Job role</b>
<b>industry</b>	<b>Job sector</b>
<b>experience_level</b>	<b>Required experience</b>
<b>education_requiment</b>	<b>Required education</b>
<b>salary_max_usd</b>	<b>Maximum salary</b>
<b>salary_variability</b>	<b>Salary fluctuation</b>
<b>salary_bracket</b>	<b>Salary range category</b>

- number\_of\_openings**    Job vacancies
- hiring\_trend**    Hiring direction
- is\_high\_demand**    High-demand indicator
- openings\_level**    Vacancy level
- region**    Job region
- cost\_region**    Cost of living level
- Remote work option**    Remotely or on-site
- job\_market\_pressure**    Market pressure
- city\_salary\_adjusted\_index**    Cost living

The U.S. job market in 2025 shows strong demand for skilled roles, with a significant portion of job openings classified as high-demand positions.

Hiring activity demonstrates noticeable seasonal patterns, with increased job openings during specific quarters, reflecting structured recruitment cycles.

In several metropolitan areas, average salaries do not fully align with the local cost of living, suggesting potential financial pressure on employees despite competitive pay levels.

Remote job opportunities remain more prevalent in technology-driven roles, highlighting the continued adoption of flexible work models.

Metropolitan cities exhibit higher salary levels and job demand compared to non-metro regions, emphasizing the concentration of opportunities in urban areas.

**3rd**

# Audience

The analysis reveals that job demand, salary levels, and geographic factors are closely interconnected, providing valuable insights for job seekers, HR professionals, and policymakers.
